

Subscription Architecture — Phase Breakdown

Overview

The Luciteria Collector Subscription system is built in three phases, each progressively adding automation while keeping admin control as the priority.

Phase 1: Manual-First Subscriptions (ACTIVE)

What It Does

- **Membership Tiers:** Bronze (\$29.99/mo), Silver (\$59.99/mo), Gold (\$99.99/mo)
- **Store Credits:** Monthly credit grants based on tier
- **Collector Packs:** Pre-built themed packs of 3 or 5 elements
- **Admin Approval:** Every order must be admin-approved before shipping
- **SKU Eligibility:** Admin controls which products are subscription-eligible

Key Constraints

- Maximum 3 membership tiers enforced at the database level
- Orders are NEVER auto-shipped
- Only eligible SKUs can appear in packs
- Subscriber-only products hidden from non-members

Data Flow

User subscribes → Tier assigned → Monthly credit granted →
User browses packs → Purchases with credits/cash →
PackOrder created (PENDING) → Admin reviews →
Admin approves → Inventory reserved → Fulfillment

Phase 2: Ownership Intelligence (DORMANT)

What It Does

- Tracks per-user SKU ownership
- Shows collection completion progress (visual rings per format)
- Suggests missing elements based on ownership data
- All behind feature flags — built but invisible until enabled

Feature Flags

Flag	Description
<code>phase2_ownership_tracking</code>	Creates UserOwnedSku records on purchase
<code>phase2_completion_display</code>	Shows progress rings on dashboard
<code>phase2_suggestions</code>	Shows “You’re missing these” suggestions

Activation Steps

1. Enable `phase2_ownership_tracking` first
 2. Backfill existing ownership data (manual or script)
 3. Enable `phase2_completion_display`
 4. Enable `phase2_suggestions` after completion data is accurate
-

Phase 3: Dynamic Curation (SCAFFOLD ONLY)

What It Will Do

- Users request “Send me N missing elements per quarter”
- System generates curated box from their collection gaps
- Admin approval required before every fulfillment
- Fixed cadence, fixed box size, controlled SKU pool

Current State

- CurationRequest model exists in schema
 - Route placeholders show “Coming Soon”
 - All server functions throw “Phase 3 not activated”
 - `phase3_enabled` flag cannot be enabled via UI
-

Database Models

Model	Phase	Purpose
MembershipTier	1	Bronze/Silver/Gold tiers
UserSubscription	1	User billing management
CreditTransaction	1	Store credit ledger
SubscriptionSku	1	SKU eligibility flags
CollectorPack	1	Pre-built packs
PackOrder	1	Order approval queue
UserOwnedSku	2	Ownership tracking
CompletionGoal	2	Completion targets
CurationRequest	3	Custom curation requests
FeatureFlag	Global	Phase toggle system
